Social Insurance in Its Relation  
to Tuberculosis. By Jno. N.  
Force, M. D.....329

ENTERED AT SAN FRANCISCO, CAL. AS SECOND-CLASS MATTER

JUST PUBLISHED

## Crile and Lower's Anoci-Association

Anoci-association is the *prevention* of postoperative shock—not its treatment. Anoci-association robs surgery of its harshness, diminishes postoperative mortality, lessens the possibility of postoperative complications (shock, nausea, vomiting, gas pains, nephritis, pneumonia, etc.). You get here, first of all, a monograph on *shock*—its kinetic theory, its histologic and clinical pathology, and its treatment. Then follow chapters on the principles of *anoci-association*; the technic of *its application* in the administration of the anesthetic in abdominal operations (gall-bladder, gastric and intestinal operations, herniotomy, perineal operations, abdominal infections, appendicitis, pelvic infections); in gynecologic operations, in genito-urinary work; in operations for cancer of the breast, rectum, stomach, uterus, larynx, and tongue; in exophthalmic goiter operations; in operations on the brain and the extremities. Then come chapters on *anoci-association* and *blood-pressure*, the relation to postoperative morbidity and mortality, and the technic of nitrous-oxid-oxygen anesthesia with details for making nitrous oxid.

Dr. A. B. Cooke, Los Angeles (in the *Journal American Medical Association*)

"I am convinced that the method of anoci-association, as worked out by Crile, offers the best means yet devised to accomplish this end [the performance of an operation with the least possible disturbance of vasomotor function]. At the same time it possesses the distinct additional advantage of protecting the patient against postoperative pain."

Octavo of 267 pages, illustrated. By GEORGE W. CRILE, M.D., Professor of Surgery, and WILLIAM F. LOWER, M.D., Associate Professor of Genito-urinary Surgery, Western Reserve University. Cloth, \$3.00 net.
